Education

Institute of Technology, Nirma University

B.Tech in Computer Science, Minor in Cyber Security | **CGPA: 8.26**

Ahmedabad, India

Jul 2023 – Jun 2027

Experience

Reyna Solutions LLP

Full Stack Developer Intern

Vadodara, India

May 2026 – Jun 2026

- Developed and integrated frontend and backend features for production applications using React, Node.js, Express.js, and MongoDB, collaborating with developers across the stack.
- Implemented REST APIs, database operations, authentication workflows, and responsive UI components while independently learning and applying new technologies during the internship.

Computer Society of India (CSI), Nirma University

Board Member

Aug 2025 – Present

- Organized technical events including Hack-NU-Thon and BID2CODE with over 1000 participants. Led promotions for CUBIX '25 which brought in 500+ registrations across 6 sub-events.

Projects

SyncUp — Activity and Community Platform

Nov 2025 – Jan 2026

React, Node.js, Express, MongoDB, Redis, JWT, Cloudinary, Leaflet  

- Built a production-deployed full stack community platform with a layered backend architecture using controllers, services, repositories, and validators, deployed on Render and Vercel.
- Implemented JWT authentication with refresh tokens, Google/GitHub OAuth, Redis-based caching, Cloudinary media storage, and security features including Helmet and mongo-sanitize.
- Developed real-time notifications, approval-based messaging, activity reviews, interactive venue mapping, and an admin dashboard for user management.

GraphShield AI — Bias Detection Platform

Feb 2026

FastAPI, Next.js 14, Gemini 2.0, Groq LLaMA 3.3-70B, Fairlearn, SHAP, spaCy, Docker  

- Audits AI systems for bias across five input types: text documents, structured datasets, trained ML models, graph networks, and graph-based ML models, all from one unified interface.
- Gemini 2.0 and Groq LLaMA run with automatic fallback; SHAP handles feature importance explanations; Fairlearn computes demographic parity; EEOC metrics like disparate impact flag compliance issues. Built for Google Solution Challenge 2026.

TrafficMind — AI Traffic Incident Command

Mar 2026 – Apr 2026

Next.js, FastAPI, LangGraph, Groq, Gemini, Mapbox, WebSocket, scikit-learn 

- Built a multi-agent traffic management system using six LangGraph agents (Signal, Routing, Alert, Density, Supervisor, and Narrative) coordinated through a Gemini-based supervisory workflow.
- Simulated traffic monitoring across 250 road segments using the Brooklyn traffic dataset, predicted congestion hotspots with DBSCAN, supported emergency vehicle prioritization, and generated post-intervention Digital Twin analyses.

Achievements

Google Solution Challenge 2026 — Top 106 Globally

Jun 2026

Selected from over 85,000 registrations and 6,700+ prototype submissions worldwide. GraphShield AI made the top 106.

1st Place — Aetrix Hackathon 2026, Smart Transportation

Mar 2026

Won a 36-hour hackathon at PDEU with team 2AM Coders by building TrafficMind, a 6-agent AI system for real-time traffic incident management.

Skills

- Languages:** C++, Python, JavaScript, TypeScript
- Technologies:** React, Next.js, Node.js, Express.js, FastAPI, MongoDB, MySQL, Redis, Docker, Git, LangGraph, Gemini API, Groq
- Core CS:** Data Structures and Algorithms, OOP, Operating Systems, DBMS, Computer Networks

Coding Profiles

- LeetCode:** Rating 1753  **Codeforces:** Pupil, Rating 1138 

Research

Satellite-Vehicular Quantum Communication (2025)

Manuscript submitted, expected Dec 2026

Implemented BBM92 and MDI-QKD protocols in Qiskit, modelling atmospheric channel loss using the Beer-Lambert law, eavesdropper interception with basis mismatch, and computed QBER, SKR, and SNR across varying distances.
